B/WINGS

THE ULTIMATE SOLUTION FOR OPEN FIELD MAINTENANCE

B/WINGS represents the evolution of mulching systems for large areas. It consists of two rear folding shredders combined with a third front-mounted shredder, ensuring wide, uniform, and highly productive working coverage.

Designed for open-field operations, B/WINGS is ideal for managing uncultivated land, cover crops, and set-aside areas, where effective and continuous shredding is required even on uneven terrain.

The range includes working widths from 8.00 to 8.80 meters, achieved

with shredding heads of 2.80 and 3.00 meters, configurable according to operational needs and available power.

It can be paired with tractors from 250 to 350 HP.

Unlike other solutions on the market, B/WINGS features a lateral displacement of the rear shredding heads up to 25 cm, allowing adjustment of the working position according to terrain conditions or tractor configuration.

This feature allows variation of overlap and ensures uniform

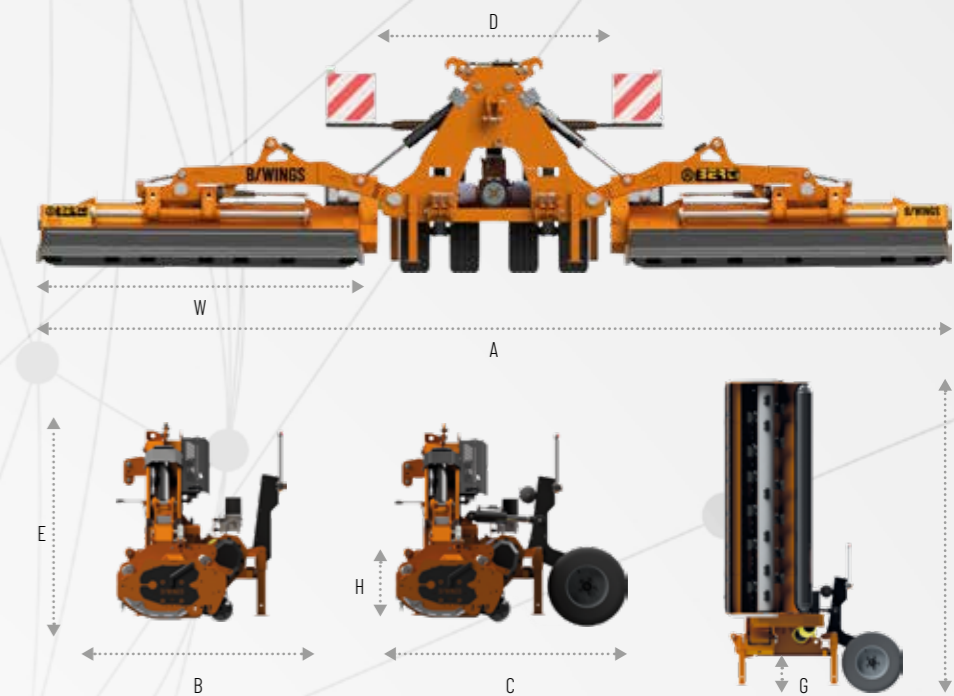

shredding even near field edges or on uneven ground.

Structural strength, efficiency, and productivity come together in a single machine designed for those who need

to work large areas with maximum performance and the proven reliability that has always distinguished the Berti brand.
